

# Quick Release Mounts

## 4 Sim Rigs

Change your rig in seconds, spend more time in the game!

***The Honeycomb Bravo Flap Detent System is designed to work with the Honeycomb Bravo Throttle Quadrant.***

### **Honeycomb Flap Detent System**

#### *Frame attachment*

The frame just clips on, bottom first. There is a small round piece of Velcro on the inside of the logo. Remove the backing from the self-adhesive when clipping it on for a more secure approach and clip in to place. Push on the logo to stick the Velcro pad to the side of your Bravo. You can leave the frame attached whether you are using the Flap lever configuration or not.

#### *Detent bars*

Choose your desired number of detents (2-10) and remove the Detent Bar from the Detent Stand, there is a small number on each one representing the number of detents. You will notice a slot towards the bottom. This mates with Frame and **must be clipped under the frame from the left, with the Flap Lever Lift (Lite version) removed or the Flap Lever (deluxe version) at the lower most of it's travel**. The Detent Bars have a magnet at each end to provide a secure fastening to the frame to hold the bar in place.

#### *Flap Lever Lift (Lite version only)*

Remove the Honeycomb flap lever and fit the Flap Lever Lift mechanism with the spring towards you. Clip the Honeycomb Flap lever back on it's lever mount stub.

#### *Flap Lever Boeing Style (Deluxe version only)*

Remove the furthest right Commercial Lever and fit the Deluxe Lever with the locating peg pointing to the right. Make sure when you push down, the lever stub is at the lower or upper most of it's travel or the locating peg is aligned with one of the detent cut-outs. Do not fit it the wrong way around as you may damage or deform the inner sleeve.

#### *Detent Stand*

There are 2 strong magnets on the base of the Detent Stand, the magnets align with the 2 centre most screws on top of the Honeycomb Bravo and may protrude slightly from the base of the stand
