

Quick Release Mounts

4 Sim Rigs

Change your rig in seconds, spend more time in the game!

The QRDee System is designed for rapid mount and dismount of Joysticks to and from your rig

Note: you will need a QRDee Base Plate to use this adapter.

Fitting the QRDee Plate to your VKB Gladiator Joystick

- Flip over the joystick so you can see the underside of the baseplate.
- If your joystick has rubber pads/feet, you are best to remove them (or use longer screws than provided in the kit).
- Warm the rubber feet with a hair dryer or heat gun on a low setting and carefully peel them off. (You can stick them to anything plastic for safe keeping in case you want to turn the joystick back to original).

- The QRDee Gladiator Adapter Plate comes already assembled on top of the QRDee QR Plate in the normal orientation. It is possible to disassemble and rotate the Adapter Plate on the QRDee Plate in 90 degree increments if a different orientation is required.
- Note the orientation of the Adapter Plate in relation to the joystick, the curved edge should be at the back of the joystick.
- Secure the Joystick base to the top of the QRDee Gladiator Adapter Plate with the provided 4x M5x10mm CAP head screws with a washer for each as shown.
- Tighten to the pinch + 1/8th Turn more.

DO NOT OVERTIGHTEN ANY OF THE SCREWS or you may damage the plastic plates.
