

Quick Release Mounts

4 Sim Rigs

Change your rig in seconds, spend more time in the game!

The QRMin System is designed for rapid mount and dismount of Rudder Pedals and Racing Pedals to and from your rig

Fitting the QRMin Logitech/Saitek Pro Flight Rudder Quick Release Plate Kit to your Logitech/Saitek Pro Flight Rudder Pedals

First remove the heel plates if fitted, you won't be using these as the screw holes they fit into will have screws in them.

The kit comes partly assembled and in 4 pieces, 1 piece fits to each corner, but in a specific way, the corners are not inter-changeable and are fixed with 8x M6x35mm Allen screws to the Rudder Pedal set.

Looking from the underside the arrangement of the plates is shown here for reference. The plates are marked for their respective positions (Front or Rear & Left or Right) when viewed looking from above.

Use 2x M6x35mm Allen screws to fit each plate, passing each screw through the holes in the Rudder Pedals indicated by the arrows in the picture below. Loosely screw in to the M6 threaded holes in the QR Plates to just before the nip, but so they can still move a bit when pushed .
DO NOT FULLY TIGHTEN at this stage!

Mount the whole assembly to the QRMin Base kit (x4 or x5) that is already attached to your rig.

Once mounted in place, nip all 8 screws up to the pinch and a bit more to secure the QR Plates in place.

Happy Flying, see you in the skies!
