

# Quick Release Mounts

## 4 Sim Rigs

Change your rig in seconds, spend more time in the game!

The QRMin System is designed for rapid mount and dismount of Rudder Pedals and Racing Pedals to and from your rig

Note: you will need a QRMin Base Plate x3 or x5 Kit to use this Kit

### Fitting the QRMin MFG Crosswind Rudder Quick Release Plate Kit to your MFG Crosswind Rudder Pedals

- If fitted, remove the wall spacers
- Flip over the Rudder pedal set so you can see the underside of the base.
- You will need to remove all 4 (self adhesive) rubber scratch pads. This is easily achieved by warming them gently with a hairdryer or low powered heat gun. They should easily peel off. You can reapply them to any part of the base of the pedals underneath (aside from where the QR Plates fit) for safe keeping in case you need to use them at another time or revert them to stock

Figure 1 - Preparing the pedals

Figure 2 - Looking from the top

- Clip the end plates over the rear feet and secure in place with 2x M6x16mm CSK screws each foot.
- Add a washer to each M6x22 CAP head screw, pass them through the body of the Rudder pedals from top to bottom and secure to the top (flat side) of the QR Plate with the orientation as shown to the left.

**DO NOT OVERTIGHTEN** the screws, to the pinch and 1/16<sup>th</sup> of a turn is sufficient.
