

Quick Release Mounts *for* Sim Rigs

QR4rigs®

Change your rig in seconds, spend more time in the game!

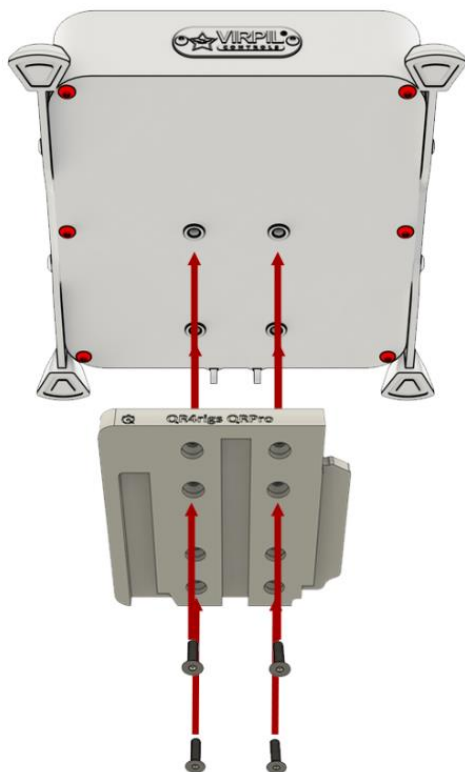

The QRPro System is designed for rapid mount/dismount of controllers on your rig!

Note: you will need a QRPro Base Mount to use this adapter.

Fitting the QRPro Virpil (VPC) MongoosT-50CM2/3 Throttle QR Plate

Optional step

- The leg supports are not required, so if you wish you can remove the 4 screws and the supports and put them in a safe place in case you need to revert to it's original state in the future

- Locate the fixing holes on the underside of the VPC Throttle and the QR Plate Kit.
- Note the orientation in the picture on the left. The QRPro system is design for controllers to be mounted directionally from the rear to the front of the rig. If you wish to mount from the front to the rear, rotate the plate and use the other holes.
- Secure the QR Plate to the Throttle with the 4x M5x18mm Screws provided in the kit.
- Tighten to the pinch then 1/16th turn.

Do NOT overtighten any of the screws.

If you require further support, please use the [contact form on our website](#), or email us directly support@qr4rigs.com, we will be more than happy to help you.
