

The QRPro System is designed for rapid mount and dismount of Controllers to and from your rig

Note: you will need a QRPro Base Mount to use this adapter.

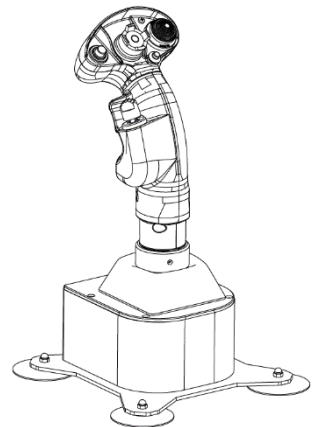

Fitting the QRPro Plate to your Winwing Orion2 Joystick Base

- Flip over the joystick so you can see the underside of the baseplate (the plate with suction cups on at the bottom in the picture)

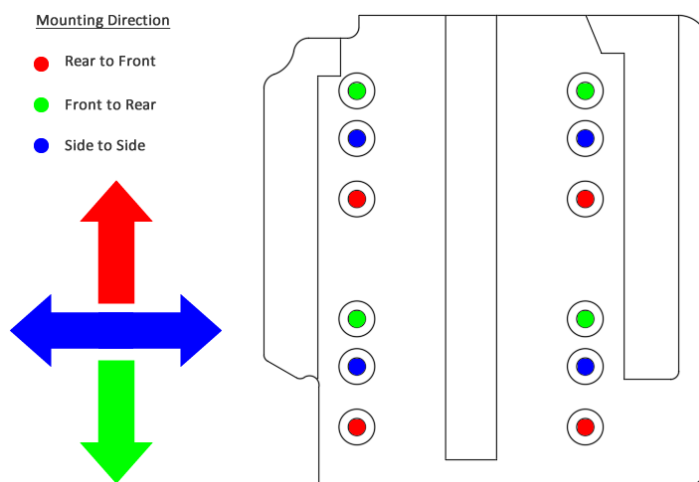

- Unscrew the 4 screws located underneath the joystick's metal base plate, and remove the metal base plate.
- Store the base plate and screws somewhere safe.

Read more: [Download Official Manual](#)

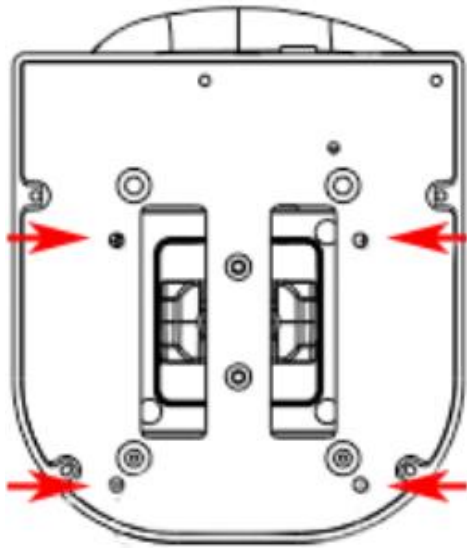

- The QRPro Winwing Orion 1/2 Joystick Quick Release Plate is designed to mount on to the QRPro Base Mount by default from the rear of the rig to the front of the rig. This may not be possible if you are centre mounting or have your QRPro mounted on your rig to enable side mounting. We have designed these alternatives in to the QR Plate for your convenience.

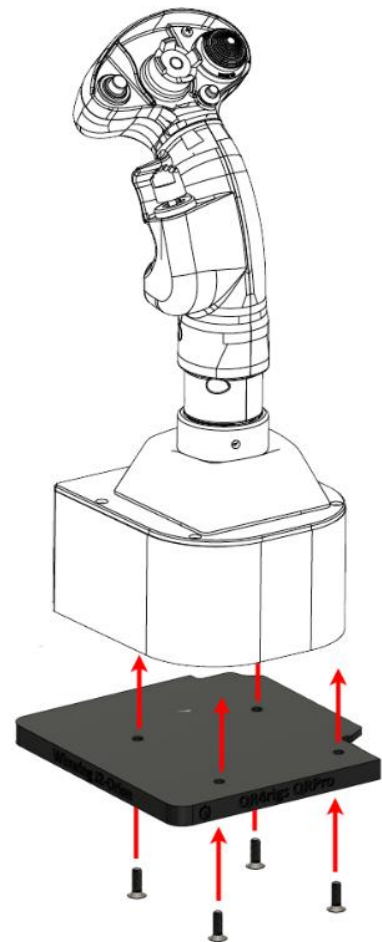

- Choose your preferred mounting direction determined by the orientation of the QRPro Base Mount mounted to your rig.

- Default **Rear to Front** is shown here marked in red, so use these holes with the joystick front at the tip of the arrowhead.

- Use the 4 screw threads located on the underside of the joystick to attach the joystick directly to your QRPro Plate with the 4x M4x12mm screws provided.

- The QR Plate shown in the picture to the right, is being mounted using the Rear to Front orientation option, so only those holes are shown for clarity
- Tighten to the pinch.

Do NOT overtighten any of the screws
